

## 2024 lambs are appearing.

The first two lambs have been born.

Perfect weather for them.

Janelle set their shed up with protected spaces and heat lamps.

But the daytime weather is ideal for newborns with fine woolen coats.

Five white wool ewes are due in this first group, then three colored hair sheep in early May, and then one more ewe-lamb is due in June.

The first photo shows a 24-hour old lamb nursing on the far side, while her mom is munching hay.

The second photo shows the lamb only.

Normal healthy lambs stand seconds after birth, and nurse in minutes.

Their legs strengthen very quickly to follow mom and the flock.

Granddaughter Hazel took these photos with my phone.
