

## **Tallow Soap**

One can of lye;

mutton or beef tallow 6 pounds;

Water 2 3/4 pints;

lye solution 90°F.;

fat 130° F.

All tallow soap is often referred to as "saddle soap" because it is valuable as a cleaner and preserver of leather.

Substitution of 1 lb. of tallow with lard, coconut or olive oil will improve the lathering properties.
